

Task 8.1C - Llama 2 ChatBot

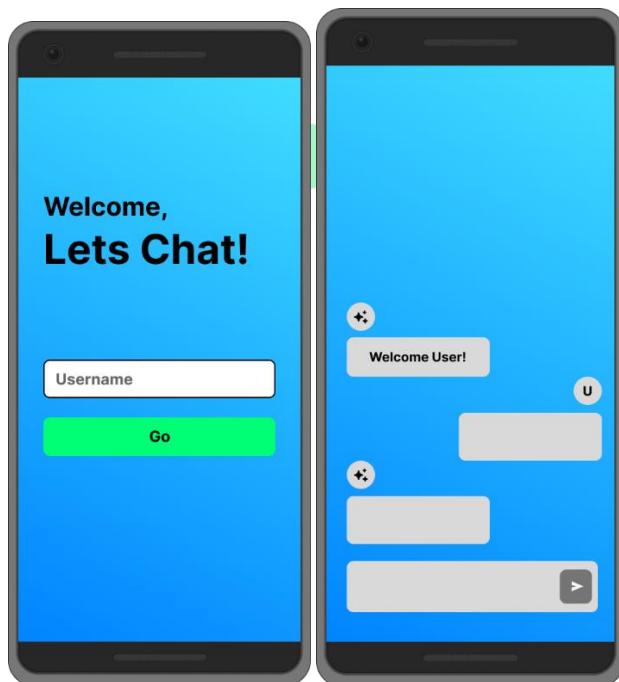

Task Description

This assessment task is designed to provide you with practical experience in integrating a chatbot within an Android mobile application. You will be utilizing the Llama 2 ChatBot backend provided by the teaching team. Your objective is to develop an Android application that adheres to the requirements described here. Discuss 1-on-1 with your tutors.

Your application should be based on the mobile app interface wireframes provided (refer to the images submitted). The app must enable users to log in and interact with a chatbot.

Requirements:

1. Implement a user authentication screen where users can enter their username to proceed.
2. Following login, display a chat interface where users can send and receive messages from the chatbot.
3. Ensure the UI design and layout match the provided example .

Submission Details:

1. You must ensure that all your project files used for this task sit in a directory called "Task 8.1".
2. All files are required to be uploaded and a link to the "Task 8.1" directory submitted to OnTrack.
3. Please make sure that unit chair and tutor have access to the folder.
